

Global Technology Gateway Network Expanded to Support MDDEAS® Deployment

March 21, 2022

GCEL has expanded its global Technology Gateway network to include a 12th participating technology firm under framework agreements supporting the worldwide deployment of MDDEAS®, the Multi-Dimensional Digital Economy Application System.

The Technology Gateway network brings together trusted technology providers from all regions of the world, collectively generating more than \$300 billion in annual revenue and employing approximately 3 million professionals worldwide. These firms serve many of the world's leading enterprises, including organizations represented across the Forbes Global 2000.

Recognizing the limitations of fragmented vertical systems, the Technology Gateways are positioned to support a neutral, non-monopolistic, point-to-world digital economy platform that strengthens existing customer systems rather than replacing them. MDDEAS® provides the horizontal integration layer needed to connect commerce, finance, insurance, and logistics across global value chains.

The platform responds directly to demand identified among G20 B2B participants, where 94.5% expressed the need for digital tools to become more competitive. By 2037, the Technology Gateway network could collectively generate over \$600 billion in additional revenue while helping businesses worldwide expand trade, reduce costs, and improve efficiency.
